WES (World Education Service)

2022

All my Chilean education is recognized for WES

A B O U T M E

I'm a professional formed in the Computer Science field. Interested in solving distinct types of problems through my academic, professional, and values formation. I have been able to produce a cultural change inside both the organization I work and my customers by considering four main elements: Methodology, process, tools, and most important, PEOPLE.

During my more than 17 years of experience working, I realized that the main success factor in any project is people and how goals can finally be achieved by bringing together multiple skills and strengths. That is why I am a professional that encourages their teams to do things with a fundamental factor known as PASSION!

E X P E R I E N C E

My recent experience is related to Sentra, a Chilean technology company that helps its customers in the transformational process and continuous improvement, through its products and services

IT Manager (2017 - Current)

Responsible for IT area, managing the budget, and creating and proposing new products and services for our customers. I Improve and impulse new methodologies and processes to reach the business objectives of the organization

Business Manager (2017 - 2015)

Direct relations with customers to discover new business opportunities related to information technologies and his business core. All these opportunities are managed to concrete the business objective: economic, performance, and quality

Head of Area (2015-2012)

In charge of the software development area, I managed the daily work and assigned functions and responsibilities. I impulsed to the teams achieve all requirements: functional, quality, and safety both in projects and services.
